

CONTRACT UPDATE DRAGON LNG

This Job at Dragon LNG involved the team having to remove spoil to a depth of 1.7m and blind the bottom in the same shift to make it safe. This included the removal of the pipe support. The team did a great job in a tight spot and were praised by the contract owner. The Team included Nigel Wilson, Louis Babosa and Roger Phillips.

CARDIFF FUEL TERMINAL BUND UPGRADE

The works at Cardiff for Valero have been completed and de-mobilisation is underway. The bund liner was completed on February 24th 2017.

The Terminal manager expressed his thanks to the entire team for a job well done with zero incidents and within the agreed programme duration. Austwel hope that the subsequent bund lining contract will come out to tender later this year. In addition Austwel have been asked to design and build a temporary bridge to allow a 50t Komatsu excavator to cross the pipe track within the 2nd Bund at Cardiff, which we hope will further cement our relationship with the client and help us with our future bid.

MAINSTAY MARINE CONCRETE BOAT INNOVATION

Billy Irving and Craig Adams recently completed work on a World War two concrete boat! During WWII concrete boats constructed from cast concrete were used as portable fresh water reservoirs.

As part of an innovative project, Mainstay Marine from Pembroke Dock requested Austwel's help in the installation of water tight doors within the hull of the boat which involved intricate formwork and the use of several specialist repair concretes and mortars. The completed structure will be fitted with solar panels and wave technology and will be used in remote areas of the world as a mobile desalination plant (Sea water converted to drinking water). The completed project will supply self-sufficient drinking water to remote communities. The works were completed within budget and the client noted that they were pleased with our work

TRAINING

Austwel Supervisors have all taken part in the CITB Site Supervisor Safety Training Scheme during February 2017. Well done to all who took part.

PROMAT FIRE PROOFING

Austwel have further invested in fire proof training for team members at the Pembroke Refinery to help with ongoing and new contract works.

EMPLOYEE OF THE MONTH

This is **Tim Jenkins** on Tank 1 at Dragon LNG using an improvised watering can to apply a waterproof joint to the oil storage tank base. In one tank there is approx 60m of joint to complete and this simple innovation allowed the joint to be completed when standing thus preventing the job from being carried out kneeling or with a bent back for prolonged periods. The joint application was carried out quickly and efficiently and demonstrates that with a little forethought a job can made easier, safer and easily simplified.

SAFETY AWARD OF THE MONTH

Chris Jones nails the Monthly Health and Safety award. Chris has provided and demonstrated commitment to our company and client expectations regarding Health and Safety matters to an exceptional standard. He addressed Valero management conducting a Quality review within the Carpenters workshop on the 15th February 2017 at the Pembroke Refinery.

He demonstrated his understanding of procedures providing evidence and a practical demonstration. Further direct questions were asked of him, which he answered professionally. This positive attitude fully complies with Valero's expectations and helps reinforce our continued position on site.

TENDERS

It has been noted that the number of tenders being received by Austwel is increasing. Austwel's business development strategy is showing positive results with tenders from new clients being received.
